COVID-19: *No New Cases in Douglas County*

Douglas County— Public Health announced today that Douglas County has no new COVID-19 cases so far this week. There was a data conflict in the state system that resulted in Douglas County appearing to have seven cases, instead of six. The state was notified of the discrepancy and the correction will be made.

Public Health is partnering with county GIS staff in developing new reporting formats that will allow residents to view local COVID-19 information on a regular basis. This information will be located on the Douglas County website as soon as possible. Check the Douglas County web page for updates and alerts.
