Subject: Summary of Perimeter Air Monitoring Results: May 3, 2018 – Between 00:00 and 23:59

The purpose of this memorandum is to provide Superior Refining Company LLC (SRC) site management and local, state and federal regulators a summary of GHD’s site perimeter air monitoring activities and results at the Husky Superior Refinery conducted from May 3, 2018 between 00:00 and 23:59 Central Daylight Time (CDT). Air monitoring activities were conducted in accordance with the Air Monitoring Plan developed in consultation with the United States Environmental Protection Agency, Wisconsin Department of Natural Resources, Wisconsin Department of Health Services, Douglas County Emergency Management Agency, and Douglas County Health and Human Services.

GHD continued to monitor air quality with 15 AreaRAE monitors located at the refinery site perimeter. Monitor maintenance was conducted by GHD following the Site protocols. The AreaRAE monitors were equipped with a photo ionization detector (PID) (10.6 eV lamp) for monitoring volatile organic compounds (VOCs) and electrochemical sensors specific for carbon monoxide (CO), hydrogen sulfide (H₂S), and flammability (LEL). GHD monitored meter status and continuous air quality monitoring results via telemetry from the refinery control room. Results were documented through data logging.

VOC detections were logged above the community action levels at some monitors on May 3, 2018. These readings were investigated with handheld air monitoring equipment and confirmed to be caused by sensor error rather than airborne VOC concentrations from the refinery. Therefore, the VOC detections do not constitute as exceedances of community action levels.
Perimeter monitoring locations and status with respect to community action levels over the period of May 3, 2018 between 00:00 and 23:59 are presented on Figure 1.

Perimeter air monitoring results for VOCs and H₂S over this period are presented on Figures 2 and 3.

The information contained in this memorandum will be considered preliminary until a final Quality Assurance/Quality Control (QA/QC) review of the data is completed. At the completion of the project, all data collected through real-time monitoring will be compiled, summarized, and reported to SRC. Data contained in the final report will go through GHD’s final QA/QC process, including review by a GHD Certified Industrial Hygienist (CIH).
Readings detected at AreaRAE locations 295-003199, and 295-003092 above the community action level were confirmed to be due to sensor drift and not representative of ambient air quality.
Readings detected at AreaRAE locations 295-003199, and 295-003092 above the community action level were confirmed to be due to sensor drift and not representative of ambient air quality.
